4 SHAPE STRUCTURE

6 AUTO MPPT DETECTION

When pressing the [AUTO MPPT] test button, the multimeter automatically adjusts the test interval time according to the current power value and refreshes the digital display.
Example: When the solar panel power is 100W, refresh once every 5S; when the solar panel power is 350W, refresh once every 15S. when the solar panel power is 700W, refresh once every 30S.

7 MANUAL MPPT DETECTION

When pressing the [manual MPPT] test button, the multimeter starts a scan of the maximum power point and refreshes the digital display, and keep the last test results.

8 OPEN-CIRCUIT VOLTAGE DETECTION

When the multimeter is working, the LCD will display the open-circuit voltage of the solar panel in real time.

9 ATTENTION

- Please be sure to use this product within the rated voltage & current power range.
- Please be sure to disconnect the solar panel from other equipment or loads before testing.
